PROFESSIONAL SUMMARY

Software Engineer and Data science enthusiast with hands on experience in developing full stack web applications, RESTful APIs, data pipelines and data driven systems using React, Python, Flask, FastAPI and PostgreSQL. Experienced in data analysis, supervised machine learning, database management, and integrating data driven solutions into software systems. Scalable in applying machine learning to real-world problems.

TECHNICAL SKILLS

Languages: JavaScript, Python

Frontend: React, HTML5, CSS3

Backend: Flask, FastAPI, REST API design & integration

Machine Learning: Scikit-learn, Tensorflow

Other: Git & GitHub, SaaS application development, Data analysis, Role-based access systems

WORK EXPERIENCE

Software Engineering Intern | Kenya Commercial Bank

2026 May-August

- Contributed in the development of SaaS product, supporting both frontend and backend development tasks.
- Assisted in building and testing API endpoint url's linking the backend to frontend.
- I gained work on experience in developing SaaS product and applying Agile test driven methodology in my systems.

Data Analyst Intern | Ministry of Education - MOE

4 months, 2024

- Managed school's records including Junior school's registry reports and visualizations to identify how schools had worked the previous years and compared them to see why school's in the Northern region had fewer students compared to schools in the central.
 - Helped in maintaining the pay records transaction data and also the database where I learned more of SQL transaction and database management
 - Worked with data handling processes that emphasized confidentiality and data security in public data records.
-

PROJECTS

Media Marketplace Platform - HTML | Javascript | Python | Flask | PostgreSQL

- Developed a secure media platform where users can create accounts, manage profiles and earn from their content.
- Implemented user authentication to protect user content from being viewed without purchasing to ensure that they earn from their content.
- Integrated payment systems to the platform including stripe and binance to help users access creators content and pay effectively according to engagements.

Github: <https://github.com/TheBoss7660/Photo-oault.git>

Modern School Management Website - HTML | Javascript | Python | Flask | FastAPI | PostgreSQL

- Developed a full school platform with both public-facing pages and an internal system with role-based portals for Principal, Teachers, Students, Parents, Admin, Admissions, and Finance.

- Built a Transport module enabling real-time tracking of student transport.

Github: <https://github.com/TheBoss7660/School-management-system.git>

Insurance Dataset Analytics Pipeline – Python | Pandas | Numpy | PowerBI | SQL

- Created insurance data pipeline which contained 12000 rows to identify which countries are involved in high fraudulent claims regarding insurance claims.
- I built a powerBI dashboard to show to help in analysis investigation for insurance claims and developed EDA pipelines for further analysis and investigations.

Github: https://github.com/TheBoss7660/Insurance_claims_project.git

Interactive Data Cleaning Web Application - Python, Streamlit, Pandas, Numpy,

- Built and developed an interactive, web application using Streamlit to help in data cleaning and manualized end to end data preprocessing and data cleaning workflows.
- Implemented user interactive controls to allow users to upload datasets, deal with duplicates, missing values, outliers and transform complex structural data attributes in real time.
- Utilized Pandas and Numpy on the backend to handle data effectively

EDUCATION

Bachelor of Science in Software Engineering — Software Engineering & Data Analysis

Murang'a University of Technology

2023 – to date

CERTIFICATIONS & TRAINING

- **Full Stack Software Development Bootcamp — TechCamp Kenya**
Python , Flask/FastAPI, React , REST APIs , SQLAlchemy, Git/GitHub
